

# THE 7-STEP IMPLEMENTATION PROCESS

## Step 1: Learn the Song Barebones

-Just whole note block chords in the Left Hand and single note melody in the Right Hand.

## Step 2: Script out structure

-Use the 4 Emotional Quadrants to decide what emotional quality you want to create with each section of the song.

## Step 3: Add Left Hand Patterns

-Add a Left Hand pattern to each section of the song. Keep in mind the emotional quality you're going for and pick a pattern that matches it.

## Step 4: Add the Right Hand Type

-Pick either the single-note, octaves, or chord tone Right Hand Types for each section of the song. Just like the left hand, you want to pick one that matches the emotional quality you're going for.

## Step 5: Add Right Hand Flares, Trills, Rolled Chords, ext.

-Find some spots in the melody where the Right Hand has some extra space and fill it with something you learned from Project Captivate. Still keep in mind the emotional quality you're going for.

## Step 6: Add the Intro, Transitions, and Outro

-Use some of the techniques in this course to add in an intro, outro and transition between sections

## Step 7: Practice!

-Make sure to use the Accelerated Learning Techniques and the correct form you learned from all the videos. Also, just like anything else, start hands separate SLOW and gradually put hands together and ramp up the speed.

## Final Note:

-This process is a great starting point. It'll get you to think about song structure in a way that'll help you go through a song step-by-step. It'll also take a long time the first time you do it. But once you've done it a couple times, the steps will become fluid and malleable, and you can be more creative instead of having exact chunked out sections. But starting off it's good to follow the exact step-by-step process.
